linkedin.com/in/aaronsinnott

aaronsinnott.me

Senior software developer with over a decade of experience building distributed, real-time systems in high-stakes production environments. Promoted to Senior in 2025 during the delivery of a critical Kafka-based feed architecture at 888Spectate. Outside of employment, I ship independent products — Ceangal (a live Irish language word game) and Foclóir Póca (an open source Irish dictionary) — as part of a broader mission to normalise Irish language use in digital and everyday spaces. Currently investing in formal leadership development and seeking roles where that technical leadership is formally recognised and structurally supported.

WORK EXPERIENCE

Senior Software Developer

Jul 2025 – Present

888Spectate · 888Sport (evoke)

- Led error-handling architecture for a consolidated Kafka feed system shared across 888 and William Hill post-acquisition, one of the platform's two most critical services. Designed a multi-level panic system for stale-price detection, event deactivation, snapshot recovery, and downstream panic/recovery propagation. Built in Java/Spring Boot with parallel consumer; promoted to Senior during delivery.
- Leading the decomposition of a critical monolithic bet-placement service — Kafka-based writer/reader architecture with independent scaling, a Lambda-driven dual-DB consistency validator reporting to S3, and an S3 archiver for message replay and debugging. Local AWS infrastructure managed via LocalStack.
- Worked closely with architects to design and defend low-level solutions in implementation reviews, ensuring robustness across distributed services.
- Onboarded and mentored engineers entering new domains; acts as a voice for the team in retrospectives — surfacing systemic issues and identifying the right forum for difficult conversations.
- Acted as an informal interface between architectural direction and delivery reality — receiving early notice of potential solution changes, exercising independent judgment about what to communicate to the team and when, and managing scope expectations without formal authority to do so.
- Consistently took ownership of structuring investigation work when incomplete architectural spike documents were provided — creating shared working documents, distributing them to the backend team, and enabling self-organisation by coordinating ownership of areas to avoid duplication of effort.
- Demonstrated willingness to raise concerns about process and delivery impact through appropriate channels — identifying issues affecting team delivery, documenting them with specific evidence, and escalating formally with a clear understanding of roles, responsibilities, and professional boundaries.

Software Developer

Mar 2021 – Jul 2025

888Spectate · 888Sport (evoke)

Mid-level developer across Kafka messaging, real-time odds delivery, regulatory integrations, cashout systems, and async Python service migration.

- Contributed to the company's first US market launch — state-level data residency, cross-region replication from US MongoDB to global MySQL, and a resilience service for DB unavailability.
- Contributed to the Spanish market launch — wallet-level betting restriction via gRPC integration with the parent company's wallet service; failed bet reporting to Snowflake via ActiveMQ.
- Contributed to a cashout offer engine rework — configurable trading margin control, binary search in-memory structure, periodic DB polling, real-time price updates, and panic-based cashout disabling.
- Contributed to a core service migration from synchronous Flask to async Sanic (Python 3.6 → 3.10); performance validated via Locust load testing and New Relic.

Mentor

Jun 2019 — Mar 2021

Code Institute

- Mentored students through full project lifecycles — requirements gathering, user stories, ERDs, wireframes, flow diagrams, and project management tooling.
- Reviewed student code and guided improvements in architecture, readability, and best practices.
- Supported interview preparation, helping students enter the industry with confidence.

Product Developer

Jan 2016 — May 2019

Code Institute

- Worked with the Programme Director to deliver course content for a full-stack developer bootcamp and develop new platform features.
- Wrote the Python Fundamentals course and integrated external learning tools into the platform.
- Designed and built projects with walkthrough videos, peer-reviewed content, and assessed student submissions.
- Stack: Python, JavaScript, Django, Flask, Bootstrap, jQuery, MySQL, MongoDB, AWS (EC2, S3), Heroku, Jenkins.

Early Career — Intern & Junior Developer

Jul 2013 — Jan 2016

Scurri · TSSG

- Scurri: early QA and junior engineering experience in a Python/Django delivery environment. Stack: Python, Django, Angular, Selenium, PostgreSQL.
- TSSG: client projects including a DRM media streaming SDK, infrastructure health dashboard, and a venue recommendation engine. Stack: Python, C#, Django, ASP.NET, MySQL.

INDEPENDENT PROJECTS

Ceangal

Solo Developer · 2026 — Present

Irish Language Word Game · ceangal.app

- Built and shipped a standalone mobile-first Irish language word game (NYT Connections format). Live at ceangal.app on AWS S3 and CloudFront via a GitHub Actions CI/CD pipeline.

Athbheochan Labs

Founder & Lead Developer · 2026 — Present

Open Source Irish Language Digital Infrastructure · athbheochan.irish

- Founded Athbheochan Labs, an open source organisation building reusable digital infrastructure for Irish language normalisation. Current project: Foclóir Póca — a free Irish-English dictionary aggregating Foras na Gaeilge data via a custom SvelteKit API layer, live at focloir.athbheochan.irish. Infrastructure on AWS Amplify and Route 53.

TECHNICAL SKILLS

LANGUAGES

Python 2.7–3.12, Java 17, TypeScript, JavaScript, Shell

BACKEND

Spring Boot, Sanic, Flask, NestJS, gRPC

FRONTEND

React 18, SvelteKit, Tailwind, Parcel

MOBILE

Capacitor, AdMob, RevenueCat

DATABASES

MySQL, MariaDB, MongoDB, Redis/ValKey

MESSAGING

Kafka, ActiveMQ, Redis Pub/Sub, WebSockets

CLOUD & INFRA

AWS EC2, Lambda, S3, CloudFront, Amplify, Route 53, LocalStack, Docker

DELIVERY & QUALITY

GitHub Actions, Pytest, unittest, Locust, Selenium, New Relic, Graylog, Plausible

EDUCATION & PROFESSIONAL DEVELOPMENT

ILM Level 4 — Leadership & Management

100/100 x4

In Progress · Baldoyle Training Centre · 2025

100/100 across all four completed modules: Leadership Styles, Problem Solving, Managing Stress & Conflict, and Managing and Implementing Change in the Workplace. Currently completing: Understanding Discipline in the Workplace.

Java SE 7 Programmer I

Oracle Certification

FETAC Level 5 — Business Computing

Further Education & Training

Microsoft Certified Professional Developer (MCPD)

70-515 Web Applications · .NET Framework 4

FETAC Level 6 — Software Development

Further Education & Training
